To Whom It May Concern

RE: Business Reference  
Power Lift Foundation Repair  
Allen, Texas

Gentlemen;

It has been my pleasure to work with Power Lift Foundation Repair since 2000. Power Lift has consistently delivered foundation support for complicated commercial projects and relatively straight-forward residential applications. For a detailed view of the company's capabilities, I strongly recommend taking the opportunity to review Power Lift Foundation Repair's case history files. The following is a short list of some of Power Lift's strengths:

- To limit 'call-backs' and provide long-term solutions to foundation problems, Power Lift Foundation Repair is relatively conservative in their approach to design and installation of support and/or underpinning elements
- Power Lift Foundation Repair utilizes Cutler-Gallaway Services Inc. and/or other well known engineering firms to provide detailed structural analysis of proposed foundation support elements
- The company has the capability of driving steel pilings and/or installing helical piers as necessary to provide foundation support for both new and remedial construction applications
- The company has equipment and personnel, with significant installation experience, which can be dedicated to 'fast-track' construction operations
- Review of several Power Lift 'bids' indicates their proposals offer excellent opportunities for construction innovation and associated cost savings while providing desired foundation support

In my opinion, Power Lift Foundation Repair should be seriously considered for selection in your upcoming project.

Respectfully submitted,

*Glenn C. Goss*
